DATA STORY: SALES PERFORMANCE ANALYSIS

OBJECTIVE:
The objective of this analysis is to understand sales performance and customer behaviour in order to identify opportunities to increase revenue.

PROBLEM:
The business wants to know which time periods and customer segments contribute the most to revenue.

ANALYSIS:
We analysed key performance indicators such as Total Revenue, Total Transactions, Average Bill Value, and Average Tip Percentage.
We also examined patterns across different days, time (lunch vs dinner), gender, and group size using an interactive dashboard built in Power BI.

KEY FINDINGS:

- Dinner generates the majority of revenue (approximately 75–76%)
- Weekend days contribute the highest sales
- The average tip percentage is around 16%
- Group size of 2 generates the highest revenue
- Larger groups contribute significantly to total revenue

CONCLUSION:
The analysis shows that customer behaviour is strongly influenced by time and group size, which directly impacts revenue generation.

CALL TO ACTION:

- Focus on improving dinner service and promotions
- Increase marketing efforts during weekends
- Encourage group bookings to maximize revenue
